

Freefall metal detection system Vistus® with separator ST 2.0

Reliable metal detection ensuring optimum product quality

German Quality

ⓘ Separator ST 2.0 benefits

- Dust-proof design for minimal product loss and increased efficiency

ⓘ Benefits of Vistus® technology

- Maximum detection sensitivity
- True In-Process Validation
- Compact enough to be used in even the tightest of spaces
- Easy installation and operation

The innovative freefall metal detection system Vistus®, in combination with the standard separator ST 2.0, provides reliable, dust-proof detection of metal foreign bodies in the product stream.

Perfected for maximum safety

- ⓘ The freefall metal detection system Vistus® offers maximum detection performance for the food industry. All **metal foreign bodies, including ferrous and non-ferrous metals and even non-magnetic stainless steels**, are consistently detected and separated from the production line.
- ⓘ **Space-saving product components** and a **reduced metal-free zone** make applications in the tightest of space possible.
- ⓘ The optional **True In-Process Validation** guarantees **authentic performance validation** – in the centre of the search coil and while the process is running.
- ⓘ The selection of **user-friendly, intuitive user interfaces** make **system setup quick and easy**. **Intuitive menu guidance** and operator terminal with touchscreen are included.
- ⓘ Available in nominal width (NW): 100, 150, 200, 250, 300

Freefall metal detection system Vistus® with separator ST 2.0

The separator ST 2.0 is used to configure your freefall system Vistus® specifically for the detection of fine-grained and dusty products. The additional seal on the internal flap ensures minimal product losses and therefore increases efficiency. The selection of search coils and tubes and the optional True-In-Process Validation mean that the metal detection system can be customised to your own specific requirements.

Control unit

Vistus® E operator terminal

21.6	473	380	216	345	232.5	190	345	225	173	173	25
26.9	538	445	269	410	288	223	410	280	215	215	36
34.1	627	534	341	499	363	267	499	355	273	273	55

Advantages of RMFZ over Standard

If moving parts made from aluminium or stainless steel (VA 1.4301), such as the scale pans on a bagging machine, are operated in front of the Vistus® R, 0.8 times the passage height must be maintained as a metal-free zone above and below the metal detector.

Vistus® RMFZ makes it possible to reduce this metal-free zone to 0.64 times the amount, in addition to the mechanically low installation height.

Throughputs

Different designs of the freefall metal detection system Vistus® are available.

Freefall pipe with separator			
Nominal width NW in mm, Separator	Diameter Di in mm, freefall pipe	Metal detector opening	Throughput kg/h
NW 80	Di 55.8	8.4	3,850
NW 100	Di 96.8	12	6,000
NW 150	Di 152.2	17.2	13,500
NW 200	Di 190.2	21.6	24,000
NW 250	Di 237.8	26.5	38,000
NW 300	Di 299.6	34.1	54,000

The effective throughput depends on the flow characteristics and density of the product. The values in the table refer to a density of $\rho=1000 \text{ kg/m}^3$. If the product's flow characteristics are optimal, the guide values can be exceeded by 50%. The data listed in this table, for example, describes a freefall metal detection system with a separator FL. Introducing a collecting grid reduces the amount of pipe cross-section available. Furthermore, a product build-up may occur in the collecting grid area as the product is falling through (because of, for example, turbulence), which may lead to a blockage.

For this reason, the collecting grid should only remain in the product stream for the short duration of a test using Minebea Intec test parts. A cover without a collecting tray, which enables you to seal the opening before and after the test and reduce the impact on the product flow, is included as standard.

Pipe quality options

Various materials are available for the freefall pipe of the metal detector:

PP – standard polypropylene pipe: suitable for detection of foreign bodies in products that do not generate static electricity. Universal solution for products that are not susceptible to electrical discharge. Outer graphite coating for static discharge.

ESD: meets food safety requirements thanks to health clearance as per EU regulations (nos 10/2011 and 1935/2004). The ESD pipe continually neutralises static charging.

Ceramic: for applications with product temperatures up to 150 °C (available upon request).

		Pipe material		
		PP graphite-coated	ESD	Ceramic
Product temperature $\vartheta < 70 \text{ °C}$	electrostatic charging	■	■	■
	abrasive			■
Product temperature $\vartheta > 70 \text{ °C}$	electrostatic charging			■
	abrasive			■

General installation instructions

Freefall metal detection systems are suitable as standard for product temperatures up to +70 °C and ambient temperatures up to +55 °C. The air cooling option may be required with higher temperatures. We are happy to help you integrate the system into your process. Our Engineering Support team will create a custom frame for installation in your production line if required. Alternatively, you can select one of the versions listed here with larger pipe cross-sections or without a separator.

- The dimensions listed in the tables apply to the 'drop heights above flange' specified in the tables, when the product has a start speed of 0 metres per second (0 m/sec)
- The total drop distance through the freefall pipe must not exceed 2.070 m for EX applications
- The following tolerances may emerge through the production process with the diameters and wall thicknesses for the ceramic freefall pipes listed in the tables

NW	80	100	150	200	250	300

Vistus® complete system with separator ST 2.0

Legend	
NW	Nominal width – TCU in mm
Di freefall pipe	Diameter inside freefall pipe in mm
T	Freefall pipe wall thickness in mm
L1	Freefall pipe with separator length in mm
L2	Freefall pipe length in mm
A	Distance from flange F1 to rubber-bonded metal elements in mm
B	Wide search coil passage in feed direction in mm
C	Wide housing search coil in feed direction in mm
D	Wide housing electronics in feed direction in mm
S	Distance from flange F1 to search coil inlet in mm

Important information regarding the separator on the ST:

- Available in nominal width (NW) 100, 150, 200, 250 and 300
- In the event of pressure differences or if the product is below the minimum grain size of 500 µm, product loss may occur
- If the grain size is larger than 2 mm, the product may be crushed between the separator wall and flap after the flap has been operated in separation or goods flow setting

The freetail metal detection system Vistus® with tube and separator can be used in potentially explosive atmospheres (zone 22, non-conductive dusts) in accordance with the provisions of Directive 2014/34/EU. The inside of the separator and conveyor tube can be used in zone 20. The freetail pipe with separator (TCU type) also bears the EX II 1/3D h T120° mark.

The product can be used in countries which accept ATEX regulations in accordance with Directive 2014/34/EU. As regards use in countries outside the European Union, the validity of the EX protection must be verified on a case-by-case basis.

Air pressure monitoring and compressed air conditioning

When you purchase a freefall system Vistus® with separator, 5 L/2 L air cells, air pressure monitoring and a pressure relief valve are all included (5 L from nominal width 250 upwards, if not 2 L). The pressure relief valve comes with a sound absorber. The components, made by the market leader, are high-quality and long-lasting.

Hole size, 2 L air cell

Hole size, 5 L air cell

Standard maintenance unit

Category 3 maintenance unit

An optional hygienic protective housing is available for the compressed air conditioning.

All run-off containers come with a BFM connection flange.

Flex pipe

Optional 'flex piping', sold by the metre, is available to purchase to connect frefall systems with upstream or downstream systems or to ensure dust-free connection of the run-off container. Ideally, this will be combined with the BFM connection flange. It consists of polyether-based polyurethane and meets food safety requirements set in EU regulations 1935/2004, 10/2011, 2023-2003 and FDA CFR21 177.2600/1680; material thickness 0.9/0.35 mm, -25 -110 / 80 °C temperature resistance.

Hygienic cover for pneumatic assembly

Integrating the pneumatic assembly and the compressed air conditioning unit into a hygienic stainless steel cabinet protects them against contamination. This in turn reduces the amount of cleaning work required and also ensures correct user intervention.

Standard frame for upright assembly

Should your application require a customised solution, we can provide professional implementation via our Engineering Support team.

Technical data for Vistus® TCU with separator ST 2.0

Supply pressure	4.0 bar to 10.0 bar overpressure	
Operating medium	Compressed air as per ISO 8573-1:2010 [7:4:4]	
Operating pressure	Min. 4.5 bar to max. 6.0 bar overpressure	
Air consumption	- Up to ID 200 Approx. 0.3 litres per separation - ID 250 and ID 300 Approx. 0.5 litres per separation	
Solenoid valve for compressed air connection	G 1/4" internal thread for plastic tube 10 mm, connection venting aperture M5	
Compressed air tank	G 1/2" with connection for plastic tube 14 mm (included in purchase price when purchasing complete system with separator)	
Pressure relief valve	Provided free of charge to protect your system	
Recommended on-site compressed air quality	Particulate matter class 4 Water class 2 Oil class 2	(Quality classes as per PNEUROP recommendation 6611)
Drop height	Max. distance to inlet flange for initial speed $v = 0$ m/s depending on the respective nominal width (NW) in mm (greater drop heights require larger installation dimensions)	
Solenoid valve	5/2-way valve monostable	
- Supply voltage	Choice of 230 V _{AC} or 115 V _{AC} 50/60 Hz, or 24 V _{DC} standard or 48 V _{DC} (please specify any deviations from the standard (24 V DC) upon order)	
- Activation	Via 'Metal' relay on evaluation electronics	
Protection class	IP65	
Supply voltage	90 V to 260 V	
Explosion protection	Version approved for II 1/3D c T120° 0 °C ≤ Ta ≤ +40 °C	
User interface	145 mm (5.7") touchscreen Password-protected, user-specific access to dialogues that are organised and adapted by functional areas Automatic teach-in function	
Relay outputs	Total of 4 relays ----> relays 1, 3 and 4 freely programmable Relay 2 'Error': fixed assignment	
Relative air humidity	Operation: < 58 % at +55 °C / Storage: < 30 % at +70 °C, 0 % to 90 % condensation-free	
Ambient temperature	Operation: -10 °C to +55 °C	
Product temperature	-30 to +55 °C, but product temperatures of up to +150 °C are possible if needed, if air cooling is connected, subject to the product characteristics	

Options

Various additional options

- End position monitoring
- Signal lights & signal horn
- Fill level monitoring
- Fingerprint sensor

Scope of delivery: 4 x test balls, or test rods; other test part options are available

Interfaces

- RS 232, RS 422
- USB printing
- TCP-IP XML server/client
- Remote control
- Profibus
- SPC@Enterprise
